PROFESSIONAL SUMMARY

Automotive Software Engineer with 2+ years of hands-on experience as a Lead Integrator at Bosch, delivering production-grade software for global ECU programs serving a major commercial vehicle OEM. Proven expertise in SIL/HIL testing, AUTOSAR architecture, and customer-facing software releases across 3 programs (GPEC5+, GMET6, T6HD). Recognized with 4 internal awards for ownership, rapid learning, and seamless mainline integration. Applied full-stack development and Python automation skills to build internal tooling that reduced delivery cycle time — demonstrating end-to-end engineering capability beyond core integration responsibilities.

PROFESSIONAL EXPERIENCE

Bosch Global Software Technologies (BGSW)

Pune, India

Software Engineer – Lead Integrator

January 2024 – Present

- Started as an Integrator in the **GPEC5+** program, contributing to software integration across **3 project** and gaining hands-on expertise in ECU integration workflows for a global commercial vehicle OEM.
- Promoted to **independent Mainline Integrator** for the **T6HD Heavy Dutys** program, owning end-to-end software builds and directly handling customer releases without supervisory support — including direct OEM customer interactions for clarifications and release coordination.
- Currently serving as **Lead Integrator** for the **T6HD Heavy Duty** program, managing **2 active variants (ICE and REPB)**, coordinating between **[5+] module teams**, and ensuring seamless mainline integration across both variants.
- Executed end-to-end SIL (Software-in-the-Loop) and HIL (Hardware-in-the-Loop) testing — including BFT, FT, RTM, and RTT — across multiple ECU platforms, ensuring release-readiness for production deployment.
- Architected and shipped “**SW Delivery Kit**”, a Python automation tool that cut release packaging time by **~70%** (from ~2 hrs to ~30 min per delivery), now used by **[6+] engineers** across the T6HD program for every customer release.
- Managed customer A2L calibration files, delivery letters, and release documentation across **[6+ releases]**; coordinated with CUFF validation teams to ensure compliance and quality.
- Led cross-functional coordination with Vehicle Function (VehFn), Engine Function (EngFn), Communication, and Diagnostics module teams — driving alignment across **[10+] engineers** to deliver timely, high-quality software builds.

ACHIEVEMENTS & RECOGNITIONS

- “**Kudos**” – **Bosch (Dec 2025)**: Recognized for dedication and support in SIL activities and consistent quality of work.
- “**Round of Applause**” – **Bosch (Apr 2025)**: Recognized by leadership for quickly adapting to the team and taking significant responsibility early in tenure while handling integration tasks for the T6HD program.
- “**Managed Complexity – Shout Out**” – **Bosch (Apr 2025)**: Appreciated for commitment, attention to detail, and ability to grasp change rationale, enabling seamless mainline integration in the T6HD ICE program.
- “**The Learner**” – **Bosch (Dec 2024)**: Appreciated for rapidly learning new technical topics and onboarding effectively into the team.

TECHNICAL SKILLS

- **Automotive & Embedded:** Classic AUTOSAR Architecture, SIL/HIL Testing, ECU Integration, Software Release Management, A2L Calibration, Diagnostics, CAN Protocol, Mainline Integration
- **Programming Languages:** C, Embedded C, Python, C++ (OOP), JavaScript, SQL, Typescript
- **Automotive Tools:** INCA, ECU-TEST, SILVER SIL, CANalyzer, CANoe, UDE, SDOM, Vector Tools (DaVinci), CI-Dashboard
- **Testing Methodologies:** Basic Functional Test (BFT), Functional Test (FT), Run Time Test (RTM), Real Target Test (RTT), Test Automation, Regression Testing

- **Web & DevOps (Secondary):** React.js, Node.js, Next.js, REST APIs, MongoDB, Docker, CI/CD Pipelines, Git, GitHub Actions
- **Methodologies:** Software Testing Lifecycle, Agile/Scrum, V-Model, Cross-Functional Team Coordination, Version Control (SVN, Git)

PERSONAL PROJECTS

SM Gadgets – Full-Stack E-Commerce Platform

smgadget.in

Tech Stack: React.js, Node.js, Next.js, MongoDB, REST APIs, Payment Gateway, Shiprocket API & Webhook

- Independently designed, developed, and deployed a production-grade e-commerce platform handling [**150+ monthly orders**] with secure authentication, product catalog, cart, and checkout flow.
- Integrated payment gateway and Shiprocket logistics API for end-to-end order processing, automated shipping label generation, and real-time shipment tracking.

Kalakriti Events – Online Competition Platform

kalakritievents.co.in

Tech Stack: React.js, Node.js, REST APIs, MongoDB, Cloud Hosting

- Built and launched Kalakriti Events, an online competition platform serving [**2,500+**] **registered users** across **6 events** with 99+% uptime.
- Engineered backend to handle concurrent traffic, user registrations, submissions, judging workflows, and event lifecycle management.

EDUCATION

Bachelor of Engineering (B.E.) in Electronics and Telecommunication Engineering

Savitribai Phule Pune University (SPPU), Pune

CGPA: [7.86/10]
June 2023

Relevant Coursework: Microprocessors & Microcontrollers, Embedded Systems, Computer Networks, Data Structures, Digital Signal Processing

CERTIFICATIONS

- Data Structures and OOP with C++ – CS104, CS105 Masterclass
- Python Programming Complete Course
